

Our Mission

To treat each person with integrity, respect and kindness.

To help each person take a significant step toward his/her desired oral and systemic health.

To serve as leaders in our community in the quest toward whole health promotion and the partnership between all health professionals.

Help Us With a Special Welcome for Your Business Team.

Jessica and Becky have beautifully stepped in for our long-time beloved Sherry and Sally. Jessica is a mother of two, a fitness buff and has with a treasure chest of dental knowledge, computer consulting and practice management experience. Becky is a wife, mother of six, and has gifts galore in organization, business, customer service and people skills. Rest assured you are surrounded by a caring, loving team with a depth of expertise.

We Want You to Know Our Dental Team is Always in School.

In keeping with one of our core values of personal and professional development, you'll be happy to know that your team is in constant learning mode. This Fall and Winter we are attending: the annual conference of the American Academy for Oral and Systemic Health, a tongue-tie/lip-tie course using laser technology, health change assisting "facilitation camp", the AES total health conference, and Dr. Susan will participate in a head and neck dissection course for advanced surgical skill development. If you want to know more about our classes, we'd love to share.

Did you Get Your HPV Saliva Test Yet?

2017 was dedicated to HPV Oral Cancer Awareness. Many of you have been informed that this deadly throat cancer is on the rise sadly it's not detectable with a visual scan. HPV oral cancer now outnumbers HPV cervical cancer and is increasing its penetration by 30% per year! Early cancer detection is critical for survival, and getting tested for HPV is easy, affordable, and confidential. We also need BIG help with spreading this news. The HPV Vaccination helps protect from a handful of the most vicious strains of HPV, but 25 of them have been associated with oral cancer. So, remind your teens and young adult children that oral sex is not safe sex and HPV is a killer.

Our Children's Hands-On Learning Lab ROCKS!

We're passionate about our goal—to help children by age 18 develop skills and habits for a lifetime of health. Through hands-on science experiences at every preventive visit, our purpose is to help them to prevent all lifestyle diseases such as obesity, diabetes, sleep apnea, acid reflux, addiction and of course caries disease (tooth decay) and periodontal (gum) disease. Kids love science and they love the learning lab. They also get a big exposure to dentistry which is why we have 13 of our mentored kids in dental school currently with over 30 practicing dentistry. It's fun to see our Hands-On Learning Lab™ being built in dental practices all around the country and we're proud it started right here on North Aurelius Road.

NEWS FROM YOUR DEDICATED DENTAL TEAM

WINTER 2017

SUSAN MAPLES, DDS

Personalized Dentistry For A Lifetime of Health

Consider the Gift of a Smile Makeover.

With 2018 on the horizon, consider the ultimate gift of self-confidence. Beautifying your loved one's smile can have a life changing impact. If your loved one has dreamed of straight teeth in just six months, replacing a missing tooth with a dental implant, resurfaced worn or stain teeth, replacing tired, worn dentures, or just lightening their natural teeth, we can help! The smile consultation will be our treat and from there we will help you with a solution that fits into your family's budget.

Welcome to the World of Laser Dentistry:

Many of you have heard of laser technology and now it's here. Dr. Susan is busy getting trained to use our new laser for surgical procedures and even for no-drill dentistry. Susan's primary motivation is to help infants with lip-ties and tongue-ties to allow a better breast feeding "latch". Babies who breast feed without assistance, grow a stronger, more powerful tongue that shapes a wider upper palate. Why is that so important? A forward tongue position helps babies develop a more open airway for the rest of their life. The unobstructed airway causes deeper, more restful sleep and as it turns out, that's one of the key factors influencing our overall health and longevity.

Another GREAT 80/20 Party and a Good Time Was Had by ALL!

We all just love honoring a special group of our patients...those who are 80 years and older who have maintained 20 or more teeth. Since we start out with 32 teeth you wouldn't think this would be hard to achieve, but it is! This group of dedicated-to-teeth patients also tend to enjoy better overall health and there's a reason for that. It turns out, when you can chew your food well you have better digestion and tend to eat a higher quality of whole foods. Vice versa is true too. Better overall health helps us keep our teeth longer. Thanks to all of you (and your guests) who could attend. Each year our team loves amusing you with our own unique talents of singing, acting, joke-telling and this year...drumroll please...synchronized swimming!
